

Exterior Care

Washing

Frequent washing helps preserve your vehicle's beauty. Dirt and grit can scratch the paint, while tree sap and bird droppings can permanently ruin the finish.

Wash your vehicle in a shady area, not in direct sunlight. If the vehicle is parked in the sun, move it into the shade and let the exterior cool down before you start.

Only use the solvents and cleaners recommended in this Owner's Manual.

NOTICE

Chemical solvents and strong cleaners can damage the paint, metal, and plastic on your vehicle.

- Rinse the vehicle thoroughly with cool water to remove loose dirt.
- Fill a bucket with cool water. Mix in a mild detergent, such as dishwashing liquid or a product made especially for car washing.
- Wash the vehicle using the water and detergent solution and a soft-bristle brush, sponge, or soft cloth. Start at the top and work your way down. Rinse frequently.
- Check the body for road tar, tree sap, etc. Remove these stains with tar remover or turpentine. Rinse it off immediately so it does not harm the finish. Remember to re-wax these areas, even if the rest of the vehicle does not need waxing.
- When you have washed and rinsed the whole exterior, dry it with a chamois or soft towel. Letting it air-dry will cause dulling and water spots.

As you dry the vehicle, inspect it for chips and scratches that could allow corrosion to start. Repair them with touch-up paint (see page 300).

NOTICE

Your vehicle is equipped with the manual antenna on the front fender. If you use a "drive-through" vehicle wash, make sure you remove the antenna first by unscrewing it by hand. This prevents the antenna from being damaged by the brushes.
